Appendix 5 Definitions and Abbreviations

Definitions

Activation Level 1, Full County Activation - may be implemented for a major event. All ESFs, the Executive Policy Group, the Liaison Group and Support Staff will be staffed 24 hours per day.

Activation Level 2, Hazard Specific Activation - may be implemented by the County Administrator, OEM Executive Director, Operations Team Leader, or the Incident Commander (or their designees). Only those ESFs impacted by the hazard or involved in the response will be represented at the EOC.

Activation Level 3, Monitoring Activation – relates to the normal operations of the Office of Emergency Management (OEM). OEM will routinely monitor situations to keep abreast of anything that may warrant action.

Acute effect- a pathologic process caused by a single substantial exposure.

Acute exposure- a single encounter to toxic concentrations of a hazardous material or multiple encounters over a short period of time (usually \leq 24 hours).

Air purification devices- respirators or filtration devices that remove particulate matter, gas, or vapors from the atmosphere. These devices range from full-face piece, dual-cartridge respirators with eye protection to half-mask, face piece-mounted cartridges with no eye protection.

Air-supplied respirators- a device that provides the user with compressed air for breathing.

Antidote- an agent that neutralizes a poison or counteracts its effects.

Apnea- cessation of breathing.

Asphyxia- a condition in which the exchange of oxygen and carbon dioxide in the lungs is absent or impaired.

Basic Plan - describes the various types of emergencies that are likely to occur in Orange County. The Basic Plan further provides procedures for disseminating warnings, coordinating responses, ordering evacuations, opening shelters, and for determining, assessing, and reporting the severity and magnitude of such emergencies. It establishes the concept under which the County and municipal governments will operate in response to actual and technological disasters.

Burn Sites - open areas identified for the collection and open burning of disaster-caused debris.

Catastrophic Disaster - a disaster that will require massive State and Federal assistance, including immediate military involvement.

Chronic effect- a pathologic process caused by repeated exposures over a period of long duration.

Clearance Time - is based on the number of people required to evacuate, the number of vehicles which may be used, the suitability of the roads (capacity, elevation, location, etc.) and then any special evacuation considerations such as medical facilities and people with special needs.

Comprehensive Emergency Management Plan (CEMP) - the purpose of the CEMP is to establish uniform policy and procedures for the effective coordination of response to a wide variety of natural and technological disasters.

Control zones- areas at a hazardous materials incident whose boundaries are based on safety and the degree of hazard; generally includes the Hot Zone, Decontamination Zone, and Support Zone.

County Warning Point - is the location that the State will contact in case of an emergency. The primary County Warning Point is located in the Orange County Communications Center.

Decontamination- the process of removing hazardous materials from exposed persons and equipment at a hazardous materials incident.

Disaster Recovery Center (DRC) - locations setup to inform and register victims of state and federal assistance programs for which they may be eligible.

Disaster Field Office (DFO) - is established in or near the designated area to support State and Federal response and recovery operations. The DFO houses the Federal Coordinating Officer (FCO) and the Emergency Response Team (ERT), and where possible, the State Coordinating Officer (SCO) and support staff.

Distribution Points - locations where in-kind donations of food, water, and other supplies received from the Resource Staging Centers will be given directly to residents. Distribution Points may be located in parking lots or open fields in the disaster area, as close to victims as possible.

Emergency Operations Center (EOC) - the site from which local governments exercise direction and control during an emergency.

Emergency Support Function (ESF) - the concept uses a functional approach to group response actions, which are most likely to be needed.

Federal Telecommunications Service Priority- The Telecommunications Service Priority (TSP) System is the regulatory, administrative, and operational system authorizing and providing for priority treatment (i.e., provisioning and restoration) of national security and emergency preparedness (NS/EP) telecommunications services.

Field Hospitals/Emergency Clinics - those sites where DMATs (Disaster Medical Assistance Teams) or local hospitals/physicians may setup temporary emergency clinics to provide emergency medical care in the disaster area. The locations are established to supplement the pre-existing medical network.

Flood Insurance Rate Maps- These maps are used by insurance agents, mortgage companies, property assessors, construction and engineering firms, and Federal, State and local governments, to determine if specific areas lie within "designated floodplains." These designated floodplains are those areas determined to be affected by 100 and 500 year floods.

Hazard Mitigation - is the process of potential improvements that would reduce or remove the hazard vulnerability.

Hazardous Material Sites - sites pre-identified in the County Hazardous Materials Plan as containing extremely hazardous substances.

Hurricane - a tropical weather system characterized by pronounced rotary circulation with a constant minimum wind speed of 74 miles per hour (64 knots) that is usually accompanied by rain, thunder and lightning, and storm surge. Hurricanes often spawn tornadoes.

Host Shelter- sites preidentified in the county to accept and house citizen from coastal communities.

Hurricane Landfall - the point and time during which the eye of the hurricane passes over the shoreline. After passage of the calm eye, hurricane winds begin again with the same intensity as before but from the opposite direction.

Hurricane Season - the six-month period from June 1st through November 30th is considered to be the hurricane season.

Hurricane Warning - is issued by the National Hurricane Center 24 hours before hurricane conditions (winds greater than 74 mph) are expected. If the hurricane path changes quickly, the warning may be issued 10 to 18 hours or less, before the storm makes landfall. A warning will also identify where dangerously high

water and waves are forecast even though winds may be less than hurricane force.

Hurricane Watch - issued by the National Hurricane Center, when a hurricane threatens, the watch covers a specified area and time period. A hurricane watch indicates hurricane conditions are possible, usually within 24-36 hours.

Incident commander- the person responsible for establishing and managing the overall operational plan at a hazardous material incident. The incident commander is responsible for developing an effective organizational structure, allocating resources, making appropriate assignments, managing information, and continually attempting to mitigate the incident.

Individual Assistance - is provided to individuals and private business in the form of grants and low interest loans by the Federal government following a Presidential disaster declaration.

Information Checkpoints - locations where residents and visitors can be directed to get information on the recovery efforts. These may be co-located with distribution points but may also be in additional locations to ensure information is accessible.

In-Place Shelter – refers to the sheltering technique where residents will be advised to remain in their homes with the windows closed and all open air circulation systems turned off. In-place sheltering should not be implemented when the sheltering duration is expected to exceed two hours. If it is determined that sheltering will exceed two hours it's best to evacuate.

Local Mitigation Strategy- The local mitigation strategy is a plan that a community can develop to promote hazard mitigation and to manage post-disaster recovery.

Local State of Emergency - will be declared whenever an evacuation is ordered by the County Chairman or the County Administrator, normal community functions are severely disrupted, Orange County requires outside assistance, or as deemed necessary by the Executive Policy Group.

Long-Term Recovery Phase - begins within a week of the disaster impact and may continue for years. Long-term recovery activities include: ongoing human service delivery; rebuilding the economy, infrastructure, and homes; implementation of hazard mitigation projects, and funds recovery.

Major Disaster - a disaster that will likely exceed local capabilities and require a broad range of State and Federal assistance.

Mandatory Evacuation Order - will be issued when there is a definite threat to life safety. Failure to comply with a mandatory evacuation order is a misdemeanor under Florida Statute 252.50.

Mass Feeding Sites - temporary locations strategically placed near the disaster area where residents can go for a meal.

Minor Disaster - a disaster that is likely to be within the response capabilities of local government and to result in only minimal need for State or Federal assistance.

NFIP Flood Zones - areas designated by the National Flood Insurance Program (NFIP) as being vulnerable to velocity and/or freshwater flooding based on the 100 and 500 year storms. Flood Zones include inland areas.

Post-Impact Response Phase - begins once the disaster occurs and may continue for up to a month. This phase includes the following activities: communications, public information, hazard abatement, search and rescue (SAR), emergency medical service delivery, temporary shelter, impact/needs assessment, security, re-entry, traffic control, debris clearance, resource distribution and volunteer management.

Pre-Impact Response Phase - is the monitoring and preparedness phase before disaster strikes. This phase may begin up to 48 hours before an incident (hurricane) and continues until the disaster occurs. This phase includes hazard monitoring/tracking incident notification, Emergency Operations Center (EOC) activation, public information and warning, evacuation, sheltering (in-place and relocation) and communications and coordination activities.

Primary Agency - each ESF is headed by a primary agency which has been selected based on its expertise, authorities, resources and capabilities.

Public Assistance - is the reimbursement and emergency assistance provided to State and local governments and private nonprofit entities from the Federal government.

Radio Amateur Civil Emergency Services (RACES) - a volunteer group of amateur radio operators who may be activated by the Office of Emergency Management or ESF #2, to provide communications support in times of an emergency.

Radioisotope Thermoelectric Generators- Thermoelectric generators, which utilize heat, generated by the combustion of a fuel source, such as propane, to create a small electrical current created when two dissimilar metals are heated. The US Atomic Energy Commission developed thermoelectric generators utilizing the heat generated by radioactive decay in the early 1960's for remote applications.

Recommended Evacuation - will be issued when it is determined that the hazard may cause discomfort to residents and minimal damage to property, but it is not expected to threaten life safety.

Resource Staging Centers - location in the County where supply donations and volunteers will be received from the Regional Recovery Center for redistribution to County distribution points. RSCs may be used as distribution points. Supplies may also be warehoused at the RSC if space permits.

Red Cross Service Centers - provide direct services to victims needing long-term recovery assistance, primarily through the use of vouchers for food, clothing, personal items, furnishings, and rental assistance.

Regional Recovery Center (RRC) - the location where all resources from outside of the area will be directed for redistribution to County Resource Staging Center as requested. The RRC is known by many other names.

Saffir/Simpson Hurricane Scale - is used by the National Hurricane Center to provide a continuing assessment of the potential for wind.

	<u>Winds</u>
Tropical Storm	39-73 mph
Category 1	74-95 mph
Category 2	96-110 mph
Category 3	111-130 mph
Category 4	131-155 mph
Category 5	155+ mph

Security Checkpoints - those locations where all traffic will be stopped to check for identification in order to determine access to the disaster area.

Shelters - temporary emergency shelters activated prior to a disaster impact, operated during the disaster and closed as soon as residents can be returned to their homes or relocated to long-term shelters or temporary housing areas.

Short-Term Recovery Phase - may begin immediately after the disaster impact and continues for approximately six months. The Short-Term Recovery Phase includes the implementation of both individual assistance programs, through Disaster Recovery Centers (DRCs) and Red Cross Service Centers, and public assistance programs through damage survey teams and forms completion.

Other short-term activities include: sheltering (hotels/motels, mobile homes, tent cities, etc.), on-going human service delivery, debris removal, contractor licensing, permitting and inspections.

Special Needs Program (SNP) - the program through which impaired persons who need special assistance in times of emergency are registered, evacuated, and sheltered.

Staging Area - is a location near or in the disaster area where personnel and equipment are assembled to coordinate response before deployment to an operational site within the disaster area.

State of Emergency – a state of emergency shall be declared by executive order or proclamation of the Governor if she or he finds an emergency has occurred or that the occurrence or the threat thereof is imminent.

Support Agency - agency in support of one or more ESFs based on their resources and capabilities to support the functional area.

Temporary Housing Area - where tents or mobile home units may be setup for residents to live in before they are able to return to their own homes or they find a new home.

Temporary Debris Storage Area – an open area or landfill space where debris will be held after debris clearance until it can be moved to a landfill, incinerator, or other appropriate disposal location.

Terrorism- a violent act, an economically destructive act, or an act dangerous to human life which is in violation of the criminal laws of the United States. This includes the unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives.

Tornadoes - are formed by severe thunderstorms, most frequently in the spring and summer. A tornado can travel for miles along the ground, lift, and suddenly change direction and strike again.

Tornado Warning - a warning is issued when a tornado funnel is sighted or indicated by radar. You should take shelter immediately. Because tornadoes can form and move quickly, there may not be time for a warning.

Tornado Watch - a watch is issued when weather conditions are favorable to the formation of tornadoes, for example, during severe thunderstorms. During a tornado watch, keep an eye on the weather and be prepared to take shelter immediately if conditions worsen.

Tropical Storm - an area of low pressure with a definite eye and counterclockwise winds of 39-74 mph. A tropical storm may strengthen to hurricane force in a short period of time.

Tropical Storm Warnings - issued by the National Hurricane Center when winds of 55-73 mph (48-63 knots) are expected.

Traffic Control Points - key intersections on the road network where we anticipate needing staff to physically control traffic flow.
